

Cybersecurity as an Internet governance problem:

Reframing the issue

Dr. Milton Mueller, Internet Governance Project, Georgia Institute of Technology

Reframing the issue

Conceptualizing the relationship

The equation of cyber security with national security

- Nationalization
 - Militarization
 - Territorialization
 - Fragmentation
 - Example of the IANA transition
-

Microsoft calls for a digital Switzerland

- Geneva Convention?
 - Companies as neutral territory
-

DNS governance and cybersecurity governance

The similarities

- Need a transnational jurisdiction
- Need global coordination and compatibility
- Distributed responsibility
- Private sector leadership in expertise and operations

The differences

- No centralized point for governance
 - Less need for uniformity/coordination
 - Private sector can't jail people and can't (or shouldn't) do law enforcement
-

Who governs - States or Stakeholders?

- Workshop May 11-12, 2017, Atlanta, USA
- Cybersecurity as an Internet governance problem
- Special issue of Journal Digital Policy, Regulation and Governance
