EU Member States aid by GDP (%)

Lethal aid: total amount by EU Member State

EU Member States + UK tanks pledges

Methodology:

For the compilation of this table, which has no claim to be exhaustive but aims to give as much details as possible with regards to the different arms systems provided- as disaggregated data, several sources were consulted and cross-referenced. First, the figures on total and military assistance, are drawn from the Kiel Institute for the World Economy's 'Ukraine support tracker' online [database](#) (last updated on 21 February 2023), in which two important caveats are expressed: first, the information about actual deliveries is - generally for security reasons, rather scarce, therefore the public has access mainly to figures regarding bilateral commitments; second, especially in the first phases of the war, some EU Member States were strictly not revealing the sum of lethal aid disbursed, let alone the disaggregated data on arms systems. Then, for the disaggregated data and details on the weapons and arms systems delivered different sources were combined: the online [database](#) from the Forum on the Arms Trade (last accessed on 22 February 2023), Kiel's 'The Ukraine Support Tracker' Working Document (No. 2218 August 2022, [link](#), and February 2023, [link](#)), the United Kingdom House of Common's 'Military assistance to Ukraine since the Russian invasion' Research Briefing (last updated and accessed on 21 February 2023, [link](#)) and brussels2, dossier n.94 ([link](#)). Then, these sources were cross-referenced with Member State's Ministries of Foreign Affairs, Defence Ministries, Prime Minister and Presidential offices' official press releases, webpages and social media pages. Finally, individual expeditions, and the corresponding entries, were tracked and added from online media sources, from both think tanks and defence specialised media and international and national press. For the three info graphics the same data sources were used and combined.
